

ARIA SOKHANGOO

Artificial Intelligence Engineering Student — LLM's & Applied AI
Istanbul, Türkiye | epochalypse.ai@gmail.com | github.com/Epochalypse00

SUMMARY

AI Engineering student specializing in LLM-based systems, retrieval-augmented generation (RAG), and AI explainability. Experienced in building end-to-end AI pipelines, including multi-stage RAG architectures and agentic workflows. Currently working on responsible AI and LLM explainability (CoT, CoV, GoT) in a regulated environment. Focused on designing AI systems that are reliable, interpretable, and production oriented — not just functional.

EDUCATION

Bahçeşehir University

B.Sc. in Artificial Intelligence Engineering

Istanbul, Turkey

2022 – 2026 (*Expected*)

EXPERIENCE

AI Engineering Intern

2026 – Present

TrustAI

Remote

- Working on LLM explainability and AI governance for high-risk domain applications.
- Implemented and compared CoT, CoV, and GoT prompting strategies and evaluated their effect on output reliability.
- Integrated FastAPI-based microservices from the Infosys Responsible AI Toolkit into existing pipelines.
- Ran evaluations on model outputs across coherence, accuracy, and grounding metrics.

Freelance AI Engineer

2024 – Present

Self-Employed

Remote

- Built RAG-based chatbots and LLM automation pipelines for various client use cases.
- Worked on prompt engineering to get more reliable and predictable outputs from LLMs.
- Connected APIs and built multi-step LLM workflows end-to-end.

Data Entry Assistant (Part-Time)

May 2024 – Sep 2024

ATLASTEK METAL

Istanbul, Türkiye

- Handled data entry, cleaning, and validation for internal datasets.
- Supported basic querying and dataset prep for reporting workflows.

PROJECTS

FinRAG — Multi-Stage Financial RAG System

LLM Systems / Retrieval / AI Pipelines

- Built a multi-stage RAG pipeline: ingestion → attribute normalization → graph construction → hybrid retrieval → answer generation with citations → multi-level evaluation.
- Used graph-based reasoning to support multi-perspective retrieval and contextual answers.
- Combined semantic embeddings with structured querying for hybrid retrieval.
- Built evaluation pipelines covering retrieval quality, answer grounding, and reliability.

AI Influencer Bots (Telegram)

LLM Applications / Agent Workflows

- Built Telegram bots that generate content and manage interactions automatically.
- Designed persona-driven agent workflows and used prompt engineering to keep tone consistent.

Human Activity Recognition

Deep Learning

- Trained 3D CNN and Transformer models for temporal activity recognition from sensor data.

SKILLS

LLM Systems: RAG, Prompt Engineering, Agent Workflows, Context Engineering

Explainability: CoT, CoV, GoT, Model Evaluation, Reliability Analysis

Backend: FastAPI, REST APIs, Microservices

ML/DL: PyTorch, TensorFlow, Supervised Learning, Feature Engineering

Tools: Docker, Git, MongoDB, Vector DBs (FAISS)
